# LARGE BORE BREATHING AIR HOSE LSBAH002

The Luno Systems LSBAH002 breathing air hose is designed for applications where high volumes of air are needed for the respiratory equipment.

Typically used with air supplied suits or as a combined airline and communication hose – Aircom™. Often these environments are contaminated so it has good resistance to chemicals and particulate contamination found in petrochemical and nuclear industry. The hose also features an antistatic liner.

SPECIFICATION	LSBAH002
Lengths	25, 50 , 90, or 100 Metres
Material & Construction	Reinforced braided PVC
EN Standard Conformity	EN14593-1, EN14594
Chemical Resistance	Most fuels, oils greases, solvents (see chemical resistance data)
Size	19mm external, 12.5 mm bore
Flexibility	Medium
Min. Bend Radius	300mm
Nominal Weight	350g/m
Operating Temp.	-20 to +50°C
Colour	Orange (other colours available on request)
Terminations	Luno stainless barbed tail and ferule with CEJN Breathing couplings
Antistatic Properties	Yes

- To specify hose length when ordering, use part no. together with required length (e.g., LSBAH002-50M = Large Bore Orange Breathing Air Hose, length = 50m)
